

DEMENTIA^{WITH} Lewy Bodies (DLB)

can make you feel like
your wires are crossed.

Learn more about the **Delphia research study**

Researchers are evaluating an investigational medication to see if it might improve cognitive ability, including attention, memory, and language in patients who have dementia with Lewy bodies (DLB).

Patients may qualify for this Delphia study if they are age 50-85, have probable dementia with Lewy bodies, and no neurological condition contributing to cognitive impairment beyond those caused by DLB.
